The BamHI site at the 3' end of this sequence (nt 10772)

corresponds to the BamHI site at the 5' end of the FGF-3/int-2 gene
sequence (nt 1; X14445), as ascertained by sequencing through this
site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Djenabi,S., Brison,O., Galdemard,C. and Lavialle,C.
Sequence analysis of the transcription control region upstream of the human FGF-3 gene
DNA Seq. 10 (4-5), 317-329 (1999)

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

### MAPPING INFORMATION:

ঠ

S

ક

र्

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, se http://genome.wustl.edu sequence, see

### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org pBACe3.6

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is this clone is at base position 1 of base position 184533 of RP11-50L21. RP11-628B17. Actual RP11-50L21; actual Actual start ctual end is a at of

```

COMMENT

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. This sequence was finished as follows unless otherwise noted:

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, B. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org pBACe3.6 Frengen, E.,

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is RP11-714G18. this clone is at base position 1 of RP11-628B17; base position 192573 of RP11-628B17. Actual start actual end is at

Polymorphisms exist between AC073344 and AC093592. Data from AC093592 was used to finish AC073344. /mol\_type="genomic\_DN /db\_xref="taxon:9606" /chromosome="2" organism="Homo sapiens" Location/Qualifiers . .192573

clone="RP11-628B17"

* NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequencing vector: Plasmid; pUC18 Chemistry: Dye-terminator Big Dye

                                                                                                                                                                                                                                                                                                      NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Louis,
                                                                                                                                                                                Fours,
```

SGC

#### NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

### MAPPING INFORMATION:

Ś 밁 Ś ORIGIN

Pocas

SOURCE

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5::1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org pBACe3

# NEIGHBORING SEQUENCE INFORMATION:

clone sequenced to the left is RP11-325M10, 200 base pair

and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 26 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      as soon as it
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center project name: PDDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (27-NOV-2003) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, On Oct 2, 2003 this sequence version replaced gi:27803375.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (19-JAN-2003) Genome Sequencing Center, Parkway, St. Louis, MO 63108, USA 5, (bases 1 to 184532)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (14-JUN-2002) Genome Sequencing Center, 4444 Forest Parkery, St. Louis, MO 63108, USA

Novel isolated nucleic acid molecule having single nucleotide polymorphism in upstream untranslated region of fibroblast growth factor-3 gene, useful for assessing related susceptibility of mammal to cancer.

Claim 1; SEQ ID NO 1; 15pp; English.

```
The invention relates to an isolated nucleic acid molecule comprising the upstream untranslated region (UTR) of fibroblast growth factor (FGF)-3 CC gene sequence (ADT97901) with a single nucleotide polymorphism (SNP) at CC position 69. Also included are an isolated nucleic acid molecule comprising a sequence complementary to ADT97901, a vector comprising the CC ADT97901 operably linked to a reporter gene, a host cell comprising the CC anticked asample from the mammal, and determining whether a cytosine CC or thymine is present at position 69 of ADT97901), a kit for performing CC the method (comprising a first oligonucleotide probe which anneals specifically with the target portion of the mammal's genome, where the first position of the mammal's genome, where the resparate nucleotide residues and the target portion includes the nucleotide residue located at position 69 of ADT97901, and a pair of primers for amplifying a reference portion of the CC ADT97901, and a pair of primers for amplifying a reference portion of the CC aligonucleotide probe that can anneal with a target portion of a mammal's genome, where the target portion includes the nucleotide residue one CC oligonucleotide probe that can anneal with a target portion of a mammal's genome, where the target portion includes the nucleotide residue one CC at position 69 of ADT97901. The method is useful for detecting SNP in FGF c3 gene in a mammal, preferably a human, and is also useful for assessing the relative susceptibility of a mammal to cancer (especially osephageal cancer), which shows an association with the presence of the C-allele. C cancer), which shows an association with the presence of the C-allele. C cancer is chosen from osesphageal, breast, ovarian, prostate, head can dneck cancer. The osesphageal cancer is chesen sequence is the upstream untranslated region (UTR) of fibroblast growth factor (FGF)-3 gene sequence.

Claim 16; SEQ ID NO 642; 182pp; English. Novel human cancer associated protein encoded within open reading frame of cancer associated gene, useful as targets for diagnosing cancer.

0

The invention relates to cancer-associated proteins (CAP) and the cancercassociated (CA) nucleic acids encoding them. The invention also relates
cassociated (CA) nucleic acids encoding them. The invention also relates
cancer associated for treating cancers involving administering to a patient an
cancer inhibitor of CAP, and a method of screening for anticancer activity in a
cancer contacting a tissue sample derived from a cancer cell with an anticancer
cancer andidate and monitoring the effect of the anticancer drug candidate
cancer associated with expression of a CAP proteins are useful for detecting
cancer associated with expression of a CAP protein in a test cell sample
cand for screening for a bloactive agent capable of modulating the
cancer, involving determining the expression of a CA nucleic acid in a
cuissue. This sequence represents a human CA gene of the invention. Note:
The sequence data for this patent did not form part of the printed
can figure in the cancer and the cancer of the printed
cancer involving determining the expression of a CA nucleic acid in a
cuissue. This sequence represents a human CA gene of the invention. Note:
The sequence data for this patent did not form part of the printed
can figure involving between the cancer in the printed
can figure involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of the printed
cancer involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concer, involving determining the expression of a CA nucleic acid in a
concerning the cancer involving determining the expression of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             문
The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of diagnosing cancer, a
                                                                                                                                                                                                                                                   The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid pro

The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated genomic DNA of the invention.

                                                                                                            Ś
                                                                                                                                                                                                                                                        polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, correspathic, cytostatic, anti-inflammatory, immunosuppressive, anti-sender, anti-sender, nephrotropic, antipasamic, antipasoriatic and hepatotropic activity. The polynucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, cell proliferative disorders (e.g. cancers including adenocarcinoma, clawasemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's classase, acquired immunodeficiency syndrome (AIDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABX34440-ABX34835 encode the MDDT polypeptides represented in SBU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU11450-ABU

                                                                                                                                                                             The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The protectins ADM0759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence of the invention.
                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID NO 578; 305pp; English.
                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides and polypeptides are useful in gene therapy, developing a diagnostic marker or medicines for regulating their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-SEP-2003

cc a variety of human tissue sources and which encode novel secreted concluded are a vector complements and sequences that hybridise to them. Also cc included are a vector comprising the polynucleotide, a host cell cransformed with the vector, the proteins encoded by the polynucleotides, antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide. The polynucleotides can be used as probes for the identification and isolation of full length cc cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of the various immune deficiencies and disorders such as viral infections, concentrated arthritis, multiple sclerosis, autoimmune disorders (e.g. crhemmatoid arthritis, multiple sclerosis, autoimmune thyroiditis and conditions useful for treating neurodegenerative diseases (e.g. Alzheimer's calso useful for treating neurodegenerative diseases (e.g. Alzheimer's ce.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and cc (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and conditions are also useful for regulating haematopoiesis, for treating myeloid or calso useful for regulating haematopoiesis, for treating myeloid or compenses encoding a secreted mores!
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 6

                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel human connective tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (cDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but the property of the printed specification, but the printed in electronic format directly from WIPO at

The polypeptide or polynucleotide is useful for preventing, treating, or ameliorating medical conditions in a mammal. The connective tissue polypeptides, polynucleotides and antibodies are particularly useful for treating, preventing and/or prognosing disorders of connective tissues (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus, scleroderma, or Sjogren's syndrome), cancers, cancer metastases and/or neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g. Alzheimer's disease, or Parkinson's disease), cardiovascular diseases (e.g. atheroselerosis, myocarditis or cardiopulmonary bypass complications), autoimmune diseases (e.g. systemic lupus erythematosus, rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           specific oligonucleotides (ASOs) as probes and primers and/or primer-
extension oligonucleotides for detecting MPL gene polymorphisms. The
polynucleotides and screened repropunds are useful for the treatment of
diseases associated with MPL activity, such as congenital amegakaryocyt
thrombocytopaenia (CAMT). The present sequence represents a reference
sequence for human MPL gene exons 9-10. Note: This sequence encodes for
